Acknowledgments

This book is the result of research conducted over a long period of time and across various disciplines, and therefore makes use of the stimuli and suggestions of many colleagues met and, fortunately, students who have chosen me for some part of their journey. All of these deserve fair collective recognition, so as not to involve them in any of my conclusions, which remain my personal responsibility. I hope, after all, that I myself will be able to share the current conclusions in the years to come.

I can publicly express devout recognition of my father, a multifaceted figure comprising the educated political scientist and strong paladin of science and democracy as supreme collective values, who early on introduced me to philosophical studies and has always solicited that curiosity for the world, passion for humanity and social responsibility that has nourished my whole life.

Thank you also to all the members of the excellent editorial team, who have helped me a lot in my work. Special thanks to: Catherine Elgar, my outstanding main contact throughout the editorial process; an anonymous referee who helped me to diminish the book’s shortcomings and give it the form that the reader will now find; Kristy Barker, the ever patient copy editor; Finn Halligan and Saffron Watts, efficient and creative editorial assistants; Rebecca Stowell, always present coordinator; and Emily Mew, my first and always encouraging contact. Sincere thanks to all of them: they created the best conditions to publish a book that an author can hope for.

A final and anticipated thanks goes also to my wife, who accompanies me lovingly on this difficult journey that does not end here. Where this book ends, in fact, a vast ocean now extends into the future, and I know I can count on her wisdom and patience. It is therefore in view of the lands that we still ignore that I hand over this book to the headway that my children, and with them future generations, will want to give to their lives, disanchoring them from the destinies however prescribed, revealing brand new routes towards unknown destinations to our common humanity.
