

## ABOUT THIS PUBLICATION

This is the third issue of the World Statistics on Mining and Utilities. Following its first release in 2010 the publication was distributed to the National Statistical Offices (NSOs), international organizations and other data users. UNIDO also informed the forty-second session of the United Nations Statistics Commission about the publication with a brief note on its sources and methods and periodicity. UNIDO sincerely appreciates the cooperation with NSOs, OECD (Organisation for Economic Co-operation and Development), UNSD (United Nations Statistics Division) and other international organizations in providing data for this publication.

Wide interest expressed by international data users, especially knowledge institutions and development partners, in mining and utilities statistics confirms the relevance of this publication. Particular interest was shown in statistics on energy related sectors such as production of coal, crude petroleum, natural gas as well as the production and distribution of electricity and gas.

The publication was prepared by a team of statistical staff under the overall supervision of Shyam Upadhyaya, Chief Statistician of UNIDO. Valentin Todorov developed the software system and produced the final manuscript. Kateryna Gumeniuk, P.Y. Rita Liang and Regina McFerren-Zenz completed the data preparation and the compilation of the country tables. Anja Sedic collected value added data from international sources and prepared the statistical tables for part I. Special thanks go to UNIDO experts Kris Boudt, Nicolai Christov and Bernhard Karner for their assistance in the software development.

The team would also like to express its sincere thanks to Ludovico Alcorta, Director of the Development Policy, Statistics and Research Branch of UNIDO, for his support in bringing out this publication.

UNIDO has granted the exclusive publishing rights of the *World Statistics on Mining and Utilities* to Edward Elgar Publishing Limited. The continued partnership with Edward Elgar Publishing Limited on UNIDO statistical publications is greatly appreciated.
